

Why this team can ship it

The prototype is scoped around skills we already have: RAG, LangGraph-style workflows, LLM evaluation, document processing, React, FastAPI, and deployment.

- Working prototype URL ready for submission
- Demo uses a realistic SmartReco project onboarding flow
- Clear judge answer: Codex writes code; DevFlow reduces KT
- Next build: real repo ingestion, citations, and local model option

DevFlow AI turns project confusion into first-task readiness.
